

## **Before Moving Motorhome Out of Storage**

- Inspect the motorhome's tires. Inflate tires to proper levels, and check tire surfaces for uneven wear, cuts or chunks of rubber missing. Note the ages of the tires, and confirm they have not timed out (7-10 years, depending on care).
- Confirm operation of the tire-pressure monitoring system, if so equipped.
- Check brake-, tail-, signal- and clearance lights for proper operation, and replace any bulbs (or LEDs) that have burned out.
- Secure interior doors, including those on the refrigerator and cabinets.
- Secure exterior doors, including those on storage compartments.
- Make sure antennas are down, and the awning has been retracted.
- As with any motor vehicle, ensure the vehicle registration and license plate tags are current.
