

## House Inspection

- Examine the LP-gas regulator.
- Have an LP-gas leak-down and pressure test performed by a certified technician.
- Check and/or replace batteries in all the safety detectors.
- Test the smoke, carbon monoxide and LP-gas detectors; replace any detectors that are out of date.
- Operate and clean the manual and/or power roof vents.
- Inspect the ceiling for leaks and mildew. Also check the ceiling condition inside the overhead cabinets.
- Test all the blinds for proper operation and replace broken strings or lifting mechanisms if necessary.
- Check the windows for proper operation and potentially defective latches.
- Operate all emergency exits.
